1.0 Introduction

This program directory is intended for system programmers who are responsible for program installation and maintenance. It contains information about the material and procedures associated with the installation of IBM DB2 Management Solution Pack for z/OS. This publication refers to IBM DB2 Management Solution Pack for z/OS as DB2 Management Solution Pack.

Additionally, this publication refers to:

- IBM DB2 Administration Tool for z/OS as DB2 Administration Tool
- IBM DB2 Object Comparison Tool for z/OS as DB2 Object Comparison Tool
- IBM DB2 Table Editor for z/OS as DB2 Table Editor
- IBM DB2 Query Monitor for z/OS as DB2 Query Monitor
- IBM DB2 Cloning Tool for z/OS as DB2 Cloning Tool
- IBM Tivoli OMEGAMON XE for DB2 Performance Expert on z/OS as OMEGAMON XE for DB2 PE on z/OS
- IBM DB2 Query Workload Tuner for z/OS as DB2 Query Workload Tuner
- IBM DB2 SQL Performance Analyzer for z/OS as DB2 SQL Performance Analyzer
- IBM DB2 Automation Tool for z/OS as DB2 Automation Tool
- IBM DB2 High Performance Unload for z/OS as DB2 High Performance Unload
- IBM DB2 Sort for z/OS as DB2 Sort for z/OS
- IBM DB2 Utilities Enhancement Tool for z/OS as DB2 Utilities Enhancement Tool
- IBM DB2 Recovery Expert for z/OS as DB2 Recovery Expert
- IBM Autonomics Director for DB2 for z/OS as Autonomics Director for DB2

The Program Directory contains the following sections:

- 2.0, “Program Materials” on page 5 identifies the basic program materials and documentation for DB2 Management Solution Pack.
- 3.0, “Program Support” on page 9 describes the IBM support available for DB2 Management Solution Pack.
- 4.0, “Program and Service Level Information” on page 12 lists the APARs (program level) and PTFs (service level) that have been incorporated into DB2 Management Solution Pack.
- 5.0, “Installation Requirements and Considerations” on page 14 identifies the resources and considerations that are required for installing and using DB2 Management Solution Pack.
- 6.0, “Installation Instructions” on page 22 provides detailed installation instructions for DB2 Management Solution Pack. It also describes the procedures for activating the functions of DB2 Management Solution Pack, or refers to appropriate publications.

Before installing DB2 Management Solution Pack, read the CBPDO Memo To Users and the CBPDO Memo To Users Extension that are supplied with this program in softcopy format and this program directory; then keep them for future reference. Section 3.2, “Preventive Service Planning” on page 9 tells you how to find any updates to the information and procedures in this program directory.
DB2 Management Solution Pack is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The program directory that is provided in softcopy format on the CBPDO tape is identical to the hardcopy format if one was included with your order. All service and HOLDDATA for DB2 Management Solution Pack are included on the CBPDO tape.

Do not use this program directory if you install DB2 Management Solution Pack with a SystemPac or ServerPac. When you use one of those offerings, use the jobs and documentation supplied with the offering. The offering will point you to specific sections of this program directory as needed.

1.1 DB2 Management Solution Pack Description

DB2 Management Solution Pack for z/OS, V2.1 (5655-MS2) provides all the IBM products needed to implement best practices for administering and optimizing the DB2 for z/OS environment. New features and functions address user needs in the areas of database administration, performance management, utilities management, and recovery management:

- Ability to more efficiently execute and manage DB2 utilities:
  - High-speed DB2 utility for unloading DB2 tables from either a table space or from an image copy
  - Significant reductions in elapsed time and processor usage and increased zIIP1 offload during utility sort processing, helping you to eliminate the need for duplicate utilities from various ISVs, reducing overall use of system resources, and improving business resiliency
  - Ability to transparently cancel active threads and block new threads on DB2 objects
  - Utility syntax monitor to establish company-wide procedures and assist with auditing
  - Message monitor, enabling customization of DB2 utility return codes to meet DB2 application needs
  - Authorization to run DB2 Utilities Suite in all supported DB2 for z/OS environments
  - Autonomic capability for DB2 Utilities

- Integrated performance management for DB2 for z/OS:
  - Comprehensive system and SQL performance monitoring to identify performance issues
  - Web-based interface built on the DSM architecture that provides expert recommendations that can help you improve the performance of query workloads
  - Ability to iteratively explore "What if" scenarios to quickly evaluate potential changes to SQL syntax
  - Integration between monitoring and tuning capabilities to expedite problem identification and resolution
  - Monitoring and tuning capabilities to assist in optimizing the use of DB2 Analytics Accelerator for z/OS
  - Flexibility to use 3270 or web-based interfaces, depending on user preferences and needs

- Ability to manage the complexity, growth, and change of your DB2 for z/OS objects and schema as well as DB2 for z/OS configuration throughout the application lifecycle with features, including:
  - In-depth catalog navigation
- Ability to implement complex data changes and migrations across multiple DB2 for z/OS environments
- Ability to administer the DB2 Analytics Accelerator environment through interactive 3720 interface or in batch
- Ability to build the inventory of DB2 for z/OS data servers and clients, and manage their configurations through a centralized tool

1.2 DB2 Management Solution Pack FMIDs

DB2 Management Solution Pack consists of the following FMIDs:

- IBM DB2 Management Solution Pack for z/OS: HALN210
- IBM DB2 Administration Tool for z/OS: H0IHC10
- IBM DB2 Object Comparison Tool for z/OS: H25GC10
- IBM DB2 Table Editor for z/OS: H25K150
- IBM DB2 Query Monitor for z/OS: H238330, H25F132, H238K0
- IBM DB2 Cloning Tool for z/OS: HCKZ320
- OMEGAMON XE for DB2 PE on z/OS: HKDB540, HKDB54X, HPMZ540, HKOB730
- IBM DB2 Query Workload Tuner for z/OS: H2AQ510
- IBM DB2 SQL Performance Analyzer for z/OS: H1D0510
- IBM DB2 High Performance Unload for z/OS: HINZ430
- IBM DB2 Sort for z/OS: HCNK210
- IBM DB2 Utilities Enhancement Tool for z/OS: H2AM220
- IBM DB2 Recovery Expert for z/OS:
- IBM Autonomics Director for DB2 for z/OS:
  HAKP160
2.0 Program Materials

An IBM program is identified by a program number. The program number for DB2 Management Solution Pack is 5655-MS2.

Basic Machine-Readable Materials are materials that are supplied under the base license and are required for the use of the product.

The program announcement material describes the features supported by DB2 Management Solution Pack. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is physical media or downloadable files. This program is in SMP/E RELFILE format and is installed by using SMP/E. See 6.0, “Installation Instructions” on page 22 for more information about how to install the program.

You can find information about the physical media for the basic machine-readable materials for DB2 Management Solution Pack in the *CBPDO Memo To Users Extension*.

Figure 1 describes the program file content for DB2 Management Solution Pack. You can refer to the *CBPDO Memo To Users Extension* to see where the files reside on the tape.

Notes:

1. The data set attributes in this table must be used in the JCL of jobs that read the data sets. However, because the data sets are in IEBCOPY unloaded format, their actual attributes might be different.

2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.

To view the Program File Content of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
• Publication number GI13-4643 for DB2 Object Comparison Tool
• Publication number GI10-8401 for DB2 Table Editor
• Publication number GI10-8976 for DB2 Query Monitor
• Publication number GI10-8910 for DB2 Cloning Tool
• Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
• Publication number GI13-4611 for DB2 Query Workload Tuner
• Publication number GI13-4609 for DB2 SQL Performance Analyzer
• Publication number GI10-8911 for DB2 Automation Tool
• Publication number GI10-8859 for DB2 High Performance Unload
• Publication number GI10-9004 for DB2 Sort for z/OS
• Publication number GI10-8765 for DB2 Utilities Enhancement Tool
• Publication number GI10-8927 for DB2 Recovery Expert
• Publication number GI13-4654 for Autonomics Director for DB2

2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for DB2 Management Solution Pack.

2.3 Program Publications

The following sections identify the basic publications for DB2 Management Solution Pack.

Figure 2 identifies the basic unlicensed publications for DB2 Management Solution Pack. Those that are in softcopy format publications can be obtained from the IBM Publications Center website at: http://www.ibm.com/shop/publications/order/

<table>
<thead>
<tr>
<th>Publication Title</th>

<td>IBM DB2 Table Editor for z/OS Program Directory</td>
<td>GI10-8401</td>
<td><a href="http://www.ibm.com/shop/publications/order/">http://www.ibm.com/shop/publications/order/</a></td>
</tr>
</tbody>
</table>
To view the unlicensed publications of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2
2.4 Program Source Materials

No program source materials or viewable program listings are provided for DB2 Management Solution Pack.

2.5 Publications Useful During Installation

You might want to use the publications listed in Figure 3 during the installation of DB2 Management Solution Pack.

<table>
<thead>
<tr>
<th>Publication Title</th>

</tr>
</tbody>
</table>
3.0 Program Support

This section describes the IBM support available for DB2 Management Solution Pack.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

The Preventive Service Planning (PSP) information for DB2 Management Solution Pack (HALN210) is listed below.

To review the Preventive Service Planning (PSP) information for the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2

Before you install DB2 Management Solution Pack, make sure that you have reviewed the current Preventive Service Planning (PSP) information. Review the PSP Bucket for General Information, Installation Documentation, and the Cross Product Dependencies sections. For the Recommended Service section, instead of reviewing the PSP Bucket, it is recommended you use the IBM.ProductInstall-RequiredService fix category in SMP/E to ensure you have all the recommended service installed. Use the FIXCAT(IBM.ProductInstall-RequiredService) operand on the APPLY CHECK command. See [6.1.10, “Perform SMP/E APPLY” on page 26](#) for a sample APPLY command.

If you obtained DB2 Management Solution Pack as part of a CBPDO, HOLDDATA is included.

If the CBPDO for DB2 Management Solution Pack is older than two weeks by the time you install the product materials, you can obtain the latest PSP Bucket information by going to the following website:
You can also use S/390 SoftwareXcel or contact the IBM Support Center to obtain the latest PSP Bucket information.

For program support, access the Software Support Website at http://www-01.ibm.com/software/support/.

PSP Buckets are identified by UPGRADEs, which specify product levels; and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for DB2 Management Solution Pack are included in Figure 4.

<table>
<thead>
<tr>
<th>UPGRADE</th>
<th>SUBSET</th>

</tbody>
</table>

3.3 Statement of Support Procedures

Report any problems which you feel might be an error in the product materials to your IBM Support Center. You may be asked to gather and submit additional diagnostics to assist the IBM Support Center in their analysis.

To identify the component IDs (COMPID) for the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product:

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High PerformanceUnload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2

Figure 5 identifies the component IDs (COMPID) for DB2 Management Solution Pack (HALN210).
<table>

4.0 Program and Service Level Information

This section identifies the program and relevant service levels of DB2 Management Solution Pack. The program level refers to the APAR fixes that have been incorporated into the program. The service level refers to the PTFs that have been incorporated into the program.

4.1 Program Level Information

To view the list of APAR fixes against the previous releases of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2

No APARs have been incorporated into DB2 Management Solution Pack (HALN210).

4.2 Service Level Information

To view the list of PTFs against the previous releases of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
• Publication number GI10-9004 for DB2 Sort for z/OS
• Publication number GI10-8765 for DB2 Utilities Enhancement Tool
• Publication number GI10-8927 for DB2 Recovery Expert
• Publication number GI13-4654 for Autonomics Director for DB2

No PTFs against this release of DB2 Management Solution Pack (HALN210) have been incorporated into the product package.

Frequently check the DB2 Management Solution Pack PSP Bucket for HIPER and SPECIAL attention PTFs against all FMIDs that you must install. You can also receive the latest HOLDDATA, then add the FIXCAT(IBM.PRODUCTINSTALL-REQUIREDSERVICE) operand on your APPLY CHECK command. This will allow you to review the recommended and critical service that should be installed with your FMIDs.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating DB2 Management Solution Pack. The following terminology is used:

- **Driving system**: the system on which SMP/E is executed to install the program.
  
The program might have specific operating system or product level requirements for using processes, such as binder or assembly utilities during the installation.

- **Target system**: the system on which the program is configured and run.
  
The program might have specific product level requirements, such as needing access to the library of another product for link-edits. These requirements, either mandatory or optional, might directly affect the element during the installation or in its basic or enhanced operation.

In many cases, you can use a system as both a driving system and a target system. However, you can make a separate IPL-able clone of the running system to use as a target system. The clone must include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Use separate driving and target systems in the following situations:

- When you install a new level of a product that is already installed, the new level of the product will replace the old one. By installing the new level onto a separate target system, you can test the new level and keep the old one in production at the same time.

- When you install a product that shares libraries or load modules with other products, the installation can disrupt the other products. By installing the product onto a separate target system, you can assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install DB2 Management Solution Pack.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements
Note: SMP/E is a requirement for installation and is an element of z/OS but can also be ordered as a separate product, 5655-G44, minimally V03.06.00.

Note: Installation might require migration to new z/OS releases to be service supported. See http://www-03.ibm.com/systems/z/os/zos/support/zos_eos_dates.html.

DB2 Query Monitor, and OMEGAMON XE for DB2 PE on z/OS invoke UNIX shell scripts during installation.

For further information on invoking UNIX shell scripts for this product, refer to the following Program Directory that is supplied with the product.

- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS

### 5.2 Target System Requirements

This section describes the environment of the target system required to install and use DB2 Management Solution Pack.

DB2 Management Solution Pack (HALN210) installs in the DBS (P115) SREL.

To view the SRELs of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements

5.2.2.1 Installation Requisites: Installation requisites identify products that are required and must be present on the system or products that are not required but should be present on the system for the successful installation of this product.

Mandatory installation requisites identify products that are required on the system for the successful installation of this product.

DB2 Management Solution Pack (HALN210) has no mandatory installation requisites.

Conditional installation requisites identify products that are not required for successful installation of this product but can resolve such things as certain warning messages at installation time.

DB2 Management Solution Pack (HALN210) has no conditional installation requisites.

To review the Installation Requisites of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2
5.2.2.2 Operational Requisites: Operational requisites are products that are required and must be present on the system or products that are not required but should be present on the system for this product to operate all or part of its functions.

Mandatory operational requisites identify products that are required for this product to operate its basic functions.

Note: *FMID HTCZ110, which is delivered either with IBM Tools Base for z/OS V01.05.00 or earlier, or, IBM Tools Customizer for z/OS, is required to customize DB2 Administration Tool. Both IBM Tools Base for z/OS V01.05.00 and IBM Tools Customizer for z/OS are no-charge products that must be separately ordered.

Conditional operational requisites identify products that are not required for this product to operate its basic functions but are required at run time for this product to operate specific functions.

DB2 Management Solution Pack (HALN210) has no conditional operational requisites.

To review the Operational Requisites of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
5.2.2.3 Toleration/Coexistence Requisites: Toleration/coexistence requisites identify products that must be present on sharing systems. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD environment at different time intervals.

DB2 Management Solution Pack has no tolerance/coexistence requisites.

5.2.2.4 Incompatibility (Negative) Requisites: Negative requisites identify products that must not be installed on the same system as this product.

DB2 Management Solution Pack has no negative requisites.

5.2.3 DASD Storage Requirements

DB2 Management Solution Pack libraries can reside on all supported DASD types.

To review the individual DASD Storage Requirements of each of the products that constitute DB2 Management Solution Pack, refer to the Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2

Figure 8 lists the total space that is required for each type of library, for DB2 Management Solution Pack (HALN210).
Notes:

1. For non-RECFM U data sets, IBM recommends using system-determined block sizes for efficient DASD utilization. For RECFM U data sets, IBM recommends using a block size of 32760, which is most efficient from the performance and DASD utilization perspective.

2. Abbreviations used for data set types are shown as follows.

- **U** Unique data set, allocated by this product and used by only this product. This table provides all the required information to determine the correct storage for this data set. You do not need to refer to other tables or program directories for the data set size.

- **S** Shared data set, allocated by this product and used by this product and other products. To determine the correct storage needed for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

- **E** Existing shared data set, used by this product and other products. This data set is not allocated by this product. To determine the correct storage for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old release and reclaim the space that was used by the old release and any service that had been installed. You can determine whether these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information about the names and sizes of the required data sets, see 6.1.8, “Allocate SMP/E Target and Distribution Libraries” on page 25.

3. All target and distribution libraries listed have the following attributes:

   - The default name of the data set can be changed.
   - The default block size of the data set can be changed.
   - The data set can be merged with another data set that has equivalent characteristics.
   - The data set can be either a PDS or a PDSE.

4. All target libraries listed have the following attributes:

   - These data sets can be SMS-managed, but they are not required to be SMS-managed.
   - These data sets are not required to reside on the IPL volume.
• The values in the "Member Type" column are not necessarily the actual SMP/E element types that are identified in the SMPMCS.

5. All target libraries that are listed and contain load modules have the following attributes:
   • These data sets can be in the LPA, but they are not required to be in the LPA.
   • These data sets can be in the LNKLST.
   • These data sets are not required to be APF-authorized.

The following figures describe the target and distribution libraries required to install DB2 Management Solution Pack (HALN210). The storage requirements of DB2 Management Solution Pack must be added to the storage required by other programs that have data in the same library.

**Note:** Use the data in these tables to determine which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

### 5.3 FMIDs Deleted

Installing DB2 Management Solution Pack might result in the deletion of other FMIDs. To see which FMIDs will be deleted, examine the ++VER statement in the SMPMCS of the product.

If you do not want to delete these FMIDs at this time, install DB2 Management Solution Pack into separate SMP/E target and distribution zones.
Note: These FMIDs are not automatically deleted from the Global Zone. If you want to delete these FMIDs from the Global Zone, use the SMP/E REJECT NOFMID DELETEFMID command. See the SMP/E Commands book for details.

5.4 Special Considerations

If you already have standalone installations of any of the products that are contained in DB2 Management Solution Pack, you do not have to install and customize those products again.

For the products that constitute DB2 Management Solution Pack, it is recommended that the same HLQ (high-level qualifier) be used for all the products that are being installed. Otherwise, that product will be indicated as “Not Found”.

To view the individual Special Considerations of the products that constitute DB2 Management Solution Pack, refer to the following Program Directories that are supplied with the product.

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of DB2 Management Solution Pack.

Please note the following points:

- You can use the sample jobs that are provided to perform part or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries that are required for SMP/E execution have been defined in appropriate zones.
- You can use the SMP/E dialogs instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing DB2 Management Solution Pack

6.1.1 SMP/E Considerations for Installing DB2 Management Solution Pack

Use the SMP/E RECEIVE, APPLY, and ACCEPT commands to install this release of DB2 Management Solution Pack.

To review the individual SMP/E installation instructions of each of the products that constitute DB2 Management Solution Pack, refer to their Program Directories, which are supplied with the product, and follow the instructions in the corresponding section(s).

- Publication number GI13-4642 for DB2 Administration Tool
- Publication number GI13-4643 for DB2 Object Comparison Tool
- Publication number GI10-8401 for DB2 Table Editor
- Publication number GI10-8976 for DB2 Query Monitor
- Publication number GI10-8910 for DB2 Cloning Tool
- Publication number GI19-5019 for OMEGAMON XE for DB2 PE on z/OS
- Publication number GI13-4611 for DB2 Query Workload Tuner
- Publication number GI13-4609 for DB2 SQL Performance Analyzer
- Publication number GI10-8911 for DB2 Automation Tool
- Publication number GI10-8859 for DB2 High Performance Unload
- Publication number GI10-9004 for DB2 Sort for z/OS
- Publication number GI10-8765 for DB2 Utilities Enhancement Tool
- Publication number GI10-8927 for DB2 Recovery Expert
- Publication number GI13-4654 for Autonomics Director for DB2
6.1.2 SMP/E Environment

The following sections pertains to the SMP/E installation of DB2 Management Solution Pack (HALN210) only.

6.1.3 SMP/E Options Subentry Values

The recommended values for certain SMP/E CSI subentries are shown in Figure 11. Using values lower than the recommended values can result in failures in the installation. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. See the SMP/E manuals for instructions on updating the global zone.

<table>
<thead>
<tr>
<th>Subentry</th>
<th>Value</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSSPACE</td>
<td>(900,900,900)</td>
<td>3390 DASD tracks</td>
</tr>
<tr>
<td>PEMAX</td>
<td>SMP/E Default</td>
<td>IBM recommends using the SMP/E default for PEMAX.</td>
</tr>
</tbody>
</table>

6.1.4 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install DB2 Management Solution Pack:

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Job Type</th>
<th>Description</th>
<th>RELFILE</th>
</tr>
</thead>
<tbody>
<tr>
<td>AXNALA</td>
<td>SMP/E</td>
<td>Sample job to allocate and initialize a new SMP/E CSI data set (Optional)</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNALB</td>
<td>SMP/E</td>
<td>Sample job to allocate SMP/E data sets (Optional)</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNRECV</td>
<td>RECEIVE</td>
<td>Sample RECEIVE job</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNALLOC</td>
<td>ALLOCATE</td>
<td>Sample job to allocate target and distribution libraries</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNDDDEF</td>
<td>DDDEF</td>
<td>Sample job to define SMP/E DDDEFs</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNAPPLY</td>
<td>APPLY</td>
<td>Sample APPLY job</td>
<td>IBM.HALN210.F1</td>
</tr>
<tr>
<td>AXNACCEPT</td>
<td>ACCEPT</td>
<td>Sample ACCEPT job</td>
<td>IBM.HALN210.F1</td>
</tr>
</tbody>
</table>

You can access the sample installation jobs by performing an SMP/E RECEIVE (refer to 6.1.7, “Perform SMP/E RECEIVE” on page 25) then copy the jobs from the RELFILES to a work data set for editing and submission. See Figure 12 to find the appropriate relfile data set.

You can also copy the sample installation jobs from the //TAPEIN or the //FILEIN DD statement and
comment out or delete the other statement. Before you submit the job, add a job card and change the lowercase parameters to uppercase values to meet the requirements of your site.

//STEP1 EXEC PGM=IEBCOPY
//SYSPRINT DD SYSOUT="
//*****************************************************************************
// Make the //TAPEIN DD statement below active if you install
// from a CBPDO tape by uncommenting the DD statement below. *
//*****************************************************************************
//TAPEIN DD DSN=IBM.HALN210.F1,UNIT=tunit,
//* VOL=SER=volser,LABEL=(x,SL),
//* DISP=(OLD,KEEP)
//*****************************************************************************
// Make the //TAPEIN DD statement below active if you install
// from a product tape received outside the CBPDO process *
// (using the optional SMP/E RECEIVE job) by uncommenting *
// the DD statement below. *
//*****************************************************************************
//TAPEIN DD DSN=IBM.HALN210.F1,UNIT=tunit,
//* VOL=SER=ALN210,LABEL=(2,SL),
//* DISP=(OLD,KEEP)
//*****************************************************************************
// Make the //FILEIN DD statement below active for *
//! downloaded DASD files. *
//*****************************************************************************
//FILEIN DD DSN=IBM.HALN210.F1,UNIT=SYSALLDA,DISP=SHR,
//* VOL=SER=filevol
//OUT DD DSNAME=jcl-library-name,
// DISP=(NEW,CATLG,DELETE),
// VOL=SER=dasdvol,UNIT=SYSALLDA,
// SPACE=(TRK,(20,10,5))
//SYSUT3 DD UNIT=SYSALLDA,SPACE=(CYL,(1,1))
//SYSIN DD *
//COPY INDD=xxxxIN,OUTDD=OUT
/*

See the following information to update the statements in the previous sample:

TAPEIN:
- **tunit** is the unit value that matches the product package.
- **volser** is the volume serial that matches the product package.
- **x** is the tape file number that indicates the location of the data set name on the tape.

See the documentation that is provided by CBPDO for the location of IBM.HALN210.F1 on the tape.

FILEIN:
- **filevol** is the volume serial of the DASD device where the downloaded files reside.

OUT:
- **jcl-library-name** is the name of the output data set where the sample jobs are stored.
- **dasdvol** is the volume serial of the DASD device where the output data set resides.
SYSIN:

**xxxxIN** is either **TAPEIN** or **FILEIN** depending on your input DD statement.

### 6.1.5 Allocate SMP/E CSI (Optional)

If you are using an existing CSI, do not execute this job.

If you are allocating a new SMP/E data set for this install, edit and submit sample job AXNALA to allocate the SMP/E data set for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.6 Initialize CSI zones (Optional)

If you are using an existing CSI, do not execute this job.

Edit and submit sample job AXNALB to initialize SMP/E zones for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.7 Perform SMP/E RECEIVE

If you have obtained DB2 Management Solution Pack as part of a CBPDO, use the RCVPDO job in the CBPDO RIMLIB data set to receive the DB2 Management Solution Pack FMIDs, service, and HOLDDATA that are included on the CBPDO package. For more information, see the documentation that is included in the CBPDO.

You can also choose to edit and submit sample job AXNRECV to perform the SMP/E RECEIVE for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.8 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job AXNALLOC to allocate the SMP/E target and distribution libraries for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.
6.1.9 Create DDDEF Entries

Edit and submit sample job AXNDDDEF to create DDDEF entries for the SMP/E target and distribution libraries for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.10 Perform SMP/E APPLY

1. Ensure that you have the latest HOLDDATA; then edit and submit sample job AXNAPPLY to perform an SMP/E APPLY CHECK for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

   The latest HOLDDATA is available through several different portals, including http://service.software.ibm.com/holdata/390holddata.html. The latest HOLDDATA may identify HIPER and FIXCAT APARs for the FMIDs you will be installing. An APPLY CHECK will help you determine if any HIPER or FIXCAT APARs are applicable to the FMIDs you are installing. If there are any applicable HIPER or FIXCAT APARs, the APPLY CHECK will also identify fixing PTFs that will resolve the APARs, if a fixing PTF is available.

   You should install the FMIDs regardless of the status of unresolved HIPER or FIXCAT APARs. However, do not deploy the software until the unresolved HIPER and FIXCAT APARs have been analyzed to determine their applicability. That is, before deploying the software either ensure fixing PTFs are applied to resolve all HIPER or FIXCAT APARs, or ensure the problems reported by all HIPER or FIXCAT APARs are not applicable to your environment.

   To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the APPLY CHECK. The SMP/E root cause analysis identifies the cause only of errors and not of warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings, instead of errors).

   Here are sample APPLY commands:

   a. To ensure that all recommended and critical service is installed with the FMIDs, receive the latest HOLDDATA and use the APPLY CHECK command as follows

      APPLY S(fmids, fmids,...) CHECK
      FORFMID(fmids, fmids,...)
      SOURCEID(RSU=+)
      FIXCAT(IBM.ProductInstall-RequiredService)
      GROUPEXTEND .

   Some HIPER APARs might not have fixing PTFs available yet. You should analyze the symptom flags for the unresolved HIPER APARs to determine if the reported problem is applicable to your environment and if you should bypass the specific ERROR HOLDs in order to continue the installation of the FMIDs.
This method requires more initial research, but can provide resolution for all HIPERs that have fixing PTFs available and are not in a PE chain. Unresolved PEs or HIPERs might still exist and require the use of BYPASS.

b. To install the FMIDs without regard for unresolved HIPER APARs, you can add the BYPASS(HOLDCLASS(HIPER)) operand to the APPLY CHECK command. This will allow you to install FMIDs even though one or more unresolved HIPER APARs exist. After the FMIDs are installed, use the SMP/E REPORT ERRSYSMODS command to identify unresolved HIPER APARs and any fixing PTFs.

```
APPLY S(fmid,fmid,...) CHECK
FORFMID(fmid,fmid,...)
SOURCEID(RSU/c5197)
FIXCAT(IBM.ProductInstall-RequiredService)
GROUPEXTEND
BYPASS(HOLDCLASS(HIPER),HOLDFIXCAT)
..any other parameters documented in the program directory
```

This method is the quicker, but requires subsequent review of the Exception SYSMOD report produced by the REPORT ERRSYSMODS command to investigate any unresolved HIPERs. If you have received the latest HOLDDATA, you can also choose to use the REPORT MISSINGFIX command and specify Fix Category IBM.ProductInstall-RequiredService to investigate missing recommended service.

If you bypass HOLDs during the installation of the FMIDs because fixing PTFs are not yet available, you can be notified when the fixing PTFs are available by using the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink.

2. After you take actions that are indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

**Note:** The GROUPEXTEND operand indicates that SMP/E applies all requisite SYSMODs. The requisite SYSMODs might be applicable to other functions.

**Expected Return Codes and Messages from APPLY CHECK:** You will receive a return code of 0 if this job runs correctly.

**Expected Return Codes and Messages from APPLY:** You will receive a return code of 0 if this job runs correctly.

### 6.1.11 Perform SMP/E ACCEPT

Edit and submit sample job AXNACCEP to perform an SMP/E ACCEPT CHECK for DB2 Management Solution Pack (HALN210). Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the ACCEPT CHECK. The SMP/E root cause analysis identifies the cause of only errors but not warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings rather than errors).
Before you use SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. In this way, you can save the entries that are produced from JCLIN in the distribution zone whenever a SYSMOD that contains inline JCLIN is accepted. For more information about the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E Commands book for details.

After you take actions that are indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

**Note:** The GROUPEXTEND operand indicates that SMP/E accepts all requisite SYSMODs. The requisite SYSMODs might be applicable to other functions.

**Expected Return Codes and Messages from ACCEPT CHECK:** You will receive a return code of 0 if this job runs correctly.

If PTFs that contain replacement modules are accepted, SMP/E ACCEPT processing will link-edit or bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder might issue messages that indicate unresolved external references, which will result in a return code of 4 during the ACCEPT phase. You can ignore these messages, because the distribution libraries are not executable and the unresolved external references do not affect the executable system libraries.

**Expected Return Codes and Messages from ACCEPT:** You will receive a return code of 0 if this job runs correctly.

### 6.1.12 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command identifies requisites for products that are installed in separate zones. This command also creates APPLY and ACCEPT commands in the SMPPUNCH data set. You can use the APPLY and ACCEPT commands to install those cross-zone requisites that the SMP/E REPORT CROSSZONE command identifies.

After you install DB2 Query Monitor, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries that describe all the target and distribution libraries to be reported on.

For more information about REPORT CROSSZONE, see the SMP/E manuals.

### 6.2 Activating DB2 Management Solution Pack
6.2.1 Product Customization

DB2 Management Solution Pack (HALN210) is fully operational after the SMP/E installation is completed. You do not have to do further customization to activate this function.

To activate the individual products that constitute DB2 Management Solution Pack, refer to their Program Directories, which are supplied with the product, and follow the instructions in the corresponding section(s).
